ALAM, UZMA

ART UNIT	PAPER NUMBER
----------	--------------

2157

DATE MAILED: 04/06/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/579,393	Applicant(s) KRIKORIAN ET AL.	
	Examiner Uzma Alam	Art Unit 2157	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 January 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3 and 5-50 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3 and 5-50 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 May 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Response to Amendment

This action is responsive amendment filed January 16, 2006. Claim 4 is cancelled and claims 47-50 are new. Claims 1-3, 5-50 are pending. Claims 1-3, 5-50 represent a system and method for a media playback system connected to a network.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, 4, 6-12, 14, 16, 17, 19-25, 27, 29-35, 37, 39, 40 and 42-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krikorian US Patent No. 5,726,909 in view of DeMoney US Patent No. 6,064,379. Krikorian teaches the invention as claimed including a continuous play of background music system (see abstract). DeMoney teaches the invention as claimed including a synchronizing presentation media streams (see abstract).

3. As per claims 1 and 24 Krikorian teaches the continuous play broadcast system and method of programming a playback control device comprising a continuous play broadcast system comprising:

a distributed communications system (column 1, lines 6-12);

a computer that is independent from said playback control device and that is connected to said distributed communications system (end user computer independent from a bridging station; column 3, lines 33-46); and

a web server that is located remotely from said computer and that is connected to said distributed communications system and to a master library of said digital media files, wherein said computer accesses said web server via said distributed communications system and via said website to alter said continuous play program for said playback control device (central computer which is connected to master library; column 3, lines 1-17; column 4, lines 59-67; column 5; column 6, lines 1-4).

Krikorian does not teach a playback control device that is connected to said distributed communications system and that includes an output device, memory that stores digital media files and a continuous play program, and a controller that outputs said digital media files to said audio output device according to said continuous play program wherein said media files include at least one of audio, video and announcements. DeMoney teaches a playback control device that is connected to said distributed communications system and that includes an output device, memory that stores digital media files and a continuous play program, and a controller that outputs said digital media files to said audio output device according to said continuous play program wherein said media files include at least one of audio, video and announcements. See column 3, lines 40-65; column 4, lines 1-34.

It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the playback control device independent from the computer of DeMoney with the bridging station of Krikorian. A person of ordinary skill in the art would have been

motivated to do this to be able to service and give more function control to a large number of end users (Krikorian column 3, lines 46-57).

4. As per claims 2 and 25, Krikorian teaches the continuous play broadcast system and method of claims 1 and 24 wherein said computer includes a browser module for accessing said web server and wherein said web server transmits executable files to said computer for creating said continuous play program (column 4, lines 27-40; column 5, lines 10-18; column 7, lines 36-45).

5. As per claims 4 and 27, Krikorian teaches the continuous play broadcast system and method of claims 1 and 24 wherein said computer and said playback control device are integrated (column 3, lines 59-67; column 4, lines 1-14).

6. As per claims 6 and 29, Krikorian teaches the continuous play broadcast system of claims 2 and 25 wherein said executable files allow said computer to select a plurality of predetermined collections of said digital media files, to allocate percentages of time for playing said collections and to create a composite collection that randomly selects said digital media files from said collections based on said allocated percentages (column 5, lines 33-43).

7. As per claims 7 and 30, Krikorian teaches the continuous play broadcast system of claims 6 and 29 wherein said executable files allow said computer to select at least one of said digital media files within said predetermined collections and to adjust the frequency at which said at

least one of said digital media files is played in said composite collection (column 5, lines 44-50).

8. As per claims 8 and 31, Krikorian teaches the continuous play broadcast system and method of claims 6 and 29 wherein said executable files allow said computer to select at least one of said digital media files within said predetermined collections and to prevent said at least one of said digital media files from playing in said composite collection (Krikorian column 5, lines 51-67).

9. As per claims 9 and 32, Krikorian teaches the continuous play broadcast system and method of claims 6 and 29 wherein said executable files allow said computer to select at least one of said digital media files within said predetermined collections and to prevent said at least one of said digital media files from playing during preselected times in said composite collection (Krikorian column 5, line 51-67).

10. As per claims 10 and 33, Krikorian teaches the continuous play broadcast system and method of claims 6 and 29 wherein said executable files allow said computer to assign said predetermined collections to a time-based schedule that forms part of said continuous play program (Krikorian column 6, lines 36-64).

Art Unit: 2157

11. As per claims 11 and 34, Krikorian teaches the continuous play broadcast system and method of claims 10 and 33 wherein said executable files allow said computer to assign said composite collection to said time-based schedule (Krikorian column 6, lines 36-64).

12. As per claims 12 and 35, Krikorian teaches the continuous play broadcast system and method of claims 10 and 33 wherein a smallest time unit provided in said time-based schedule can be varied (Krikorian column 6, lines 36-64).

13. As per claim 14 and 37, Krikorian teaches the continuous play broadcast system and method of claims 2 and 25 wherein said executable files allow said computer to access continuous play programs for a plurality of said playback control devices (column 5, lines 10-50).

14. As per claims 16 and 39, Krikorian teaches the continuous play broadcast system and method of claims 2 and 25 wherein said executable files allow said computer to display a digital media file that is currently being played by said playback control device and at least one digital media file that follows said digital media file that is currently being played (column 5, lines 51-67).

15. As per claims 17 and 40, Krikorian teaches the continuous play broadcast system and method of claims 16 and 24 wherein said web server delivers at least one digital media file to

Art Unit: 2157

said computer as a streaming media file for output to said output device connected to said computer (column 4, lines 27-40).

16. As per claims 19 and 42, Krikorian discloses the continuous play broadcast system and method of claims 2 and 25 wherein said executable files allow said computer to select business hours to operate said playback control device (column 6, lines 65-67; column 7, lines 1-6).

17. As per claims 20 and 43 Krikorian discloses the continuous play broadcast system and method of claims 2 and 24 wherein said web server includes a password logon security module for accessing said continuous play programs (column 4, lines 15-26).

18. As per claims 21 and 44 Krikorian discloses the continuous play broadcast system and method of claims 2 and 24 wherein said master library further contains at least one of digital announcement files, video files, and text/graphics files (column 3, lines 9-17).

19. As per claim 22 and 45, Krikorian discloses the continuous play broadcast system and method of claims 21 and 25 wherein said executable files allow said computer to schedule at least one of said digital announcement files in said continuous play broadcast of said playback control device (column 6, lines 16-67; Figure 4).

20. As per claims 23 and 46, Krikorian discloses the continuous play broadcast system and method of claims 22 and 25 wherein said executable files allow said computer to schedule at

Art Unit: 2157

least one of said digital announcement files and said video files in said continuous play broadcast of said playback control device on a recurring basis (column 6, lines 58-64).

21. As per claims 47 and 49, Krikorian teaches the continuous play broadcast system of claims 1 and 24. Krikorian does not teach wherein the computer alters the play programs for a plurality of playback control devices. DeMoney teaches wherein the computer alters the play programs for a plurality of playback control devices. See column 4, lines 24-50.

It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the playback control device independent from the computer of DeMoney with the bridging station of Krikorian. A person of ordinary skill in the art would have been motivated to do this to be able to service and give more function control to a large number of end users (Krikorian column 3, lines 46-57).

22. As per claims 48 and 50, Krikorian teaches the continuous play broadcast system of claim 1. Krikorian does not teach wherein said computer groups at least two of said playback control devices and creates a common continuous play program for said at least two of said playback control devices. DeMoney teaches wherein said computer groups at least two of said playback control devices and creates a common continuous play program for said at least two of said playback control devices. See column 4, lines 9-50.

It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the playback control device independent from the computer of DeMoney with the bridging station of Krikorian. A person of ordinary skill in the art would have been

motivated to do this to be able to service and give more function control to a large number of end users (Krikorian column 3, lines 46-57).

23. Claims 3, 5, 13, 15, 18, 26, 28, 36, 38 and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krikorian US Patent No. 5,726,909 in view DeMoney US Patent No. 5,726,909 as applied to claims 1, 2, 4, 8-12, 14, 16, 17, 19-25, 27, 31-35, 37, 39, 40 and 42-46 above and in further view of Leeke et al. US Patent No. 6,587,127. Leeke discloses the invention substantially as claimed including a content player with user profile (see abstract).

24. As per claims 3 and 26, Krikorian discloses the continuous play broadcast system and method of claims 2 and 25. Krikorian does not disclose wherein said executable files are at least one of Active-x components, Java Applets and Java Script. Leeke discloses Java Applet files. See column 4, lines 50-67. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the Java Applets of Leeke with the executable files of Krikorian. A person of ordinary skill in the art would have been motivated to do this to accommodate a variety of browsers.

25. As per claims 5 and 28, Krikorian discloses the continuous play broadcast system and method of claims 2 and 24 wherein said executable files allow said computer to select and manage custom playlists by selecting a plurality of said digital media files from said master library and by allowing at least one of sequencing said digital media files and playing said digital media files. See column 4, lines 59-67; column 5, line 1-32. Krikorian does not explicitly

Art Unit: 2157

disclose randomly playing the files. Leeke discloses randomly playing the files. See column 8, lines 3-31. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine playing of Krikorian with randomly playing of Leeke. A person of ordinary skill in the art would have been motivated to do this to provide personalized content.

26. As per claims 13 and 36, Krikorian teaches the continuous play broadcast system and method of claims 2 and 24. Krikorian does not disclose wherein said executable files allow said computer to select and arrange custom collections by allowing at least one of selecting a plurality of said digital media files from said master library and by sequencing said digital media files and randomly playing said digital media files. See column 6, lines 11-20; column 8, lines 4-31; column 48, lines 48-67. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine playing files of Krikorian with selecting files of Leeke. A person of ordinary skill in the art would have been motivated to do this to provide personalized content.

27. As per claims 15 and 38, Krikorian teaches the continuous play broadcast system and method of claims 14 and 25. Krikorian does not disclose wherein said executable files allow said computer to group at least two of said playback control devices and to create a common continuous play program for said at least two of said playback control devices. Leeke discloses grouping two playback control devices. See column 49, lines 36-65. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine playback control devices of Krikorain with grouping the devices of Leeke. A person of ordinary skill in the art would have been motivated to do this to integrate audio and video files.

28. As per claims 18 and 41, Krikorian teaches the continuous play broadcast system and method of claims 1 and 24. Krikorian does not disclose wherein said web server stores a profile for said playback control device. Leeke discloses storing a profile. See column 6, lines 11-20. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine a profile of Leeke with the web server and library of Krikorain. A person of ordinary skill in the art would have been motivated to do this to manage user data and preferences.

Response to Arguments

29. Applicant's arguments filed January 16, 2006 have been fully considered but they are not persuasive.

30. Applicant argues that the references cited by the examiner, Krikorian US Patent No. 5,726,909 and DeMoney US Patent No. 6,064,379 do not teach the claimed computer. Krikorian, however, does teach "a computer that is independent from said playback control device and that is connected to said distributed communications system," as claimed by the Applicant. This feature is taught in Krikorian by the end user computer in Figure 1.

31. Applicant argues that the computer in the claim must be independent from the playback computer device and the remote from the web server. The end user computer in Krikorian is remote from the central computer, as shown in Figure 1. This central computer is analogous to the web server of the claim.

32. The playback control device of the claim is taught by the DeMoney reference. The playback control device is accessed through a server connected to a network. The playback

control device is taught by the subsystems of the multimedia server system of DeMoney. These server subsystems are accessed by a computer which is located remotely. The remotely located computer of the claim is the end user computer of Krikorian and the web server of the claim in the Central computer of Krikorian. The playback control device of the claim is taught by the subsystems of the multimedia server system of DeMoney. It is obvious that the multimedia server system is connected to the end computer and has the same networking features as central computer of Krikorian.

Conclusion

33. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

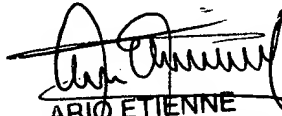

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

34. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Uzma Alam whose telephone number is (571) 272-3995. The examiner can normally be reached on Monday-Tuesday 5:30 AM - 2:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571) 272-4001. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
